In today's competitive world, profit margins are rapidly shrinking as market forces decide selling prices, whereas, input prices are exponentially increasing.

Cost cutting is vital to business. Out of five M's of management; Men, Material, Machine, Money and Methods, **only methods have potential to provide high cost cutting with low investment.** The challenge is now technological; the new focus area has shifted to performance improvement.

Richoms Power And Infrastructure Pvt Ltd provides energy audit services.

What is Energy Audit ?

Energy Audit is an official scientific study of energy consumption of an organisation / process / plant / equipment aimed at reduction of energy consumption and energy costs. Without affecting productivity and comforts suggesting the methods for energy saving and reduction in energy cost. Energy audit is carried out in planner, official manner by every energy intensive organisation / plant management.

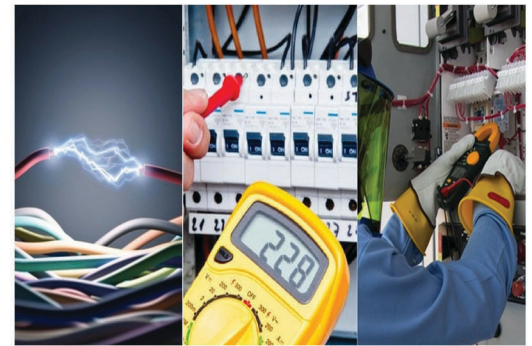

Types of Energy Audit

➤ Preliminary Audit

Preliminary audit is carried out in the limited time and it highlights the energy cost and wastage in the major expenses and process.

➤ Detailed Audit

It is a thorough and extensive energy audit that analyses and quantifies the amount of energy consumption in each sub-system of the plant and compares the same with the target energy consumption.

Benefits

- It helps to reduce energy costs in your facility.
- With a reduction in production costs, the competitiveness of your company will be improved.
- It helps you to lower energy bills.
- It helps you to increase the life span of the equipment in your company.
- It discovers any unaccounted consumption that may exist at the facility.
- Reduces maintenance costs.
